Mono-filament nylon line.

**Code 04**  
  
RR  
**\$8.00**  
  
**(includes postage\*)**

**Please note: All parts are subject to postage charges\***

- If the door is latching too strongly/loudly with the standard two weights, always try fitting the Slow valve sleeve (S) to achieve a softer close rather than removing one of the weights.
- The weights are designed to be eased apart sideways. Extra care should be taken not to drop them when handling as the end connections can fracture if impacted. Such damage is not covered by warranty, nor is corrosion of the steel weight resulting from damage to the weight's plastic sheath.
- Guaranteed to close security and screen doors in good condition up to 1.5 x 2.4 metres in size. In the case of glass doors these can vary significantly in weight, and in friction between weather strip and track. Therefore it is suggested that the closer be clamped to the door (for convenience to the leading stile) and pre-tested prior to final fitment.
